# Eco renovate your home

**This one-day course is for anyone thinking about making a home more energy efficient.**

It is suitable for homeowners or landlords who want to learn about the changes they can make to their own homes – and *anyone* who wants to learn about the best ways to make existing buildings more energy efficient.

## What you will learn

Participants will learn about practical changes they can undertake to make their homes more energy efficient. It will highlight areas where individuals can both save money and reduce their carbon footprint.

We will look at energy saving, from simple DIY tasks to major alterations with the relative costs of different measures. There will be a brief overview of realistic renewable energy options and the grants that may be available to you.

By the end of the course, participants will be aware of the areas within their homes that they can make suitable changes, the estimated cost of these changes, and the associated financial, energy and CO<sub>2</sub> savings.

Participants are asked to complete an energy audit on their homes before the course using resources that we provide. This will enable you to gain the information that is tailored to your specific needs and to leave the course with practical next steps that you can make.

**To book and for full details of this and other exciting courses and events please visit:**
